Delemar is One of Haroun's S.A.E factories for Aluminum, was established in 2008, and began production in 2011, Delemar is an Egyptian joint stock company S.A.E with a capital of 75,000,000 (seventy Five million Egyptian pounds), located in the industrial area - Abu Rawash - Cairo-Alexandria Desert Road with employees number about 300 workers at the time current and considered one of the most modern integrated manufacturing facilities for Aluminum industry in Egypt , also Delemar company is the brother company of Alutech company for aluminum profiles & these two companies with a capital of EGP 150.000.000 .

Noting that all production lines belongs to us are Chiness production lines & it's the production of the largest companies in China.

Production

Production capacity is estimated at 20,000 tons annually and projected to reach 35,000 tons annually after the completion of the second phase of the production lines by the end of 2015

Equipments

Wooden factories colors

Dies factory

Paint factory

Anodizing factory

Casting

Number 2 Extrusion presses with Force capacity of 2,500 Metric tons, each press capacity is 800 tons Monthly.

Production Guidance

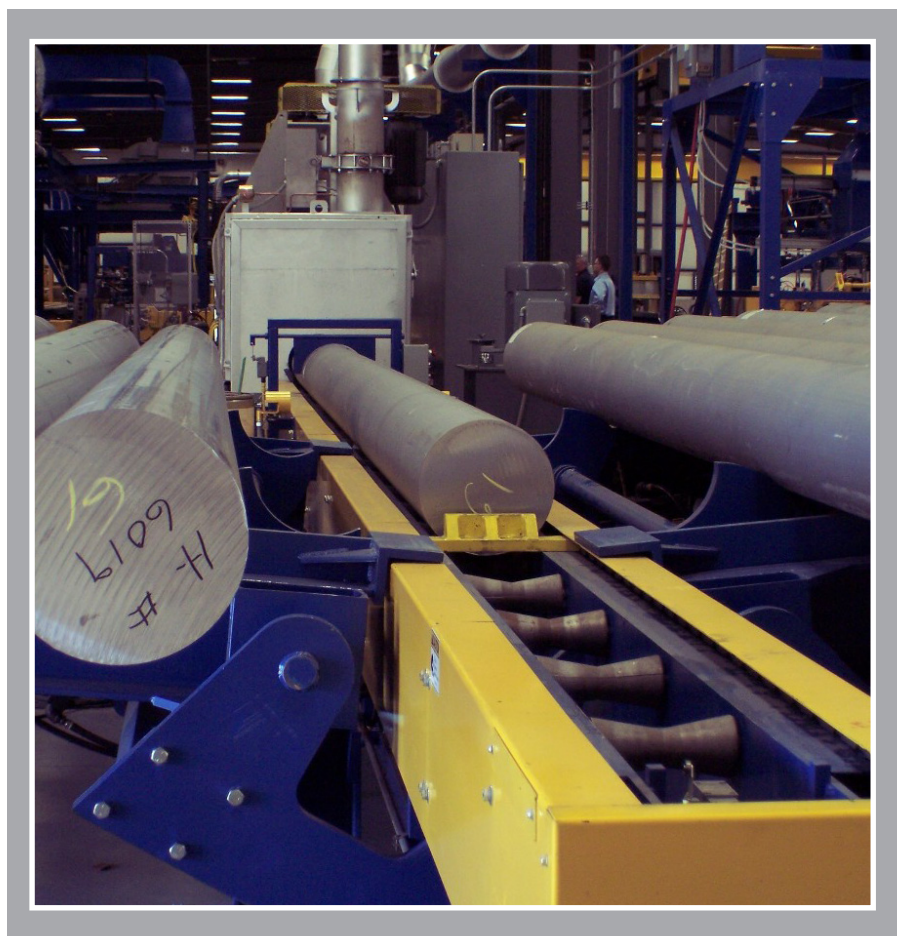

Domestic market

Go about 60% of production

Foreign market

40% of production is exported for
Africa, Middle East & Asia

The company strives to complete the standards and quality certificates required for the access of the European and American markets with loudest and most modern technology held by us.

Factory Activity

Producing aluminum profiles as:-

Domestic & export profiles

Doors and Windows profiles

and interfaces

Special profiles of the architectural systems

profiles for industrial

purposes and metallurgical

industries forms

Producing moulds

Paints

Anodizing & Wooden colors

casting and smelting scrap

Production of All about the aluminum industry

Quality Standards

The company stratifies quality standards in accordance with ISO 9001, 9002, 9014

Company operates to raise the efficiency and quality standards for production

and factory in the next phase and the company seeks to get the highest ISO certifications and also certificates required for entry in the European markets.

Technical Specifications

Materials

-All aluminium Profiles are from extruded aluminium alloy 6063 according to American Standards ASTM B221 (B22 IM) - 02 - 2004 or German Standards (Din 1748 Part 1).

Alloy Components :

Silicon	:	0.2 - 0.6%
Iron	:	0.35%
Manganese	:	0.10%
Magnesium	:	0.45- 0.9%
Copper	:	0.1%
Chromium	:	0.1%
Zinc	:	0.1%
Titanium	:	0.05 - 0.1%
Aluminium	:	All the rest

Finish

-All exposed surfaces of the aluminium profiles is treated either by anodizing treatment (according to DIN 17611) or by electrostatic Powder coating to meet international standards.

-Anodizing treatment according to DIN 17611 with thickness from 16 to 20 micron according to next standards:

Abrasion	A.S.T.M D-968-72
Acid	A.S.T.M D-3260-73
Detergent	A.S.T.M D-2248-73

-Electrostatic powder coating according to RAL Specifications with thickness more than 70 micron.

Technical Features

In all systems there are varieties available in types and dimensions.

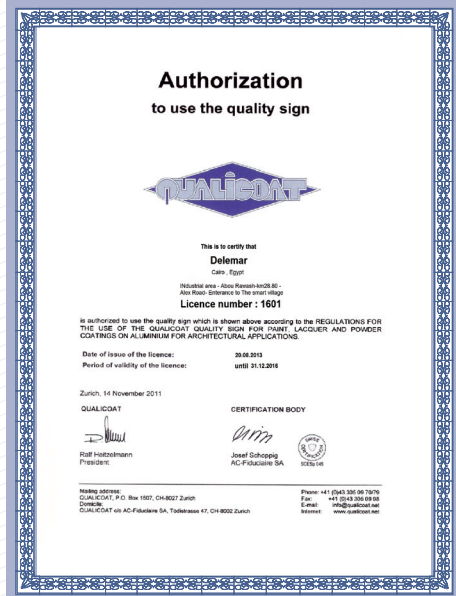

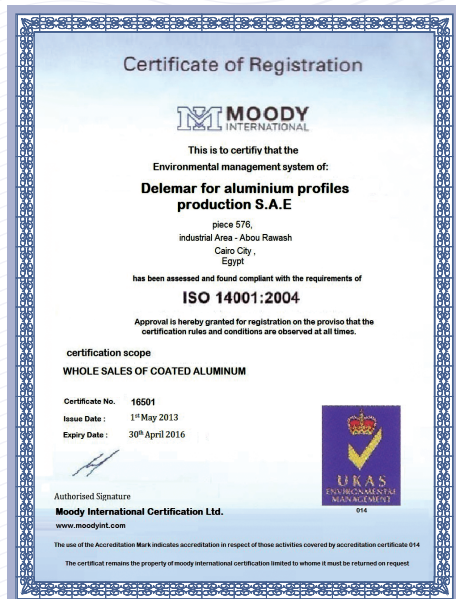

Tolerances in weights and dimensions are according to standard ANSI H35.2 TABLE5 or (Din 1748)

The profiles provide a large range of infill types and measures, due to the availability of different profile types and a wide range of gaskets sizes.

Glazing gaskets inside and outside of E.P.D.M. all- around, gasket

Profiles visually are in the same level inside and outside to enhance the gasket visibility.
